Read numbers from a file

[Start of transcript. Skip to the end.](#)

PETRA: So far, whenever one of our programs needed a user input, such as a temperature to be converted from Celsius to Fahrenheit or a student's grade,

we have the user enter this input at program execution time in the terminal window.

Now imagine you have a lot of data to be entered,

be it to compute the average grade in a class for lots of students or something
