Code 1 ✕ | + | 🕐

```
1   #include <stdio.h>
2   #include <stdlib.h>
3
4   int main(int argc, char **argv)
5   {
6       int nplants;
7       double ppplant, total_price;
8       if (argc != 3)
9           printf("Invalid input.\n");
10      else
11      {
12          nplants = atoi(argv[1]);
13          ppplant = atof(argv[2]);
14          total_price = nplants * ppplant;
15          printf("%d plants for %.2lf dollars each cost %.2lf dollars.\n", nplants, ppplant, total_pr
16      }
17      return 0;
18  }
```
