Difference between the example provided and actual Taskgrader output

discussion posted 6 months ago by **zigurath**

Hello,

There is a difference between the provided examples and the Taskgrader output.

Example:

95.23 94.80 91.56 96.40 93.25 99.64

Output:

No 4

Actual output when running a solution that Taskgrader validated successfully:

No 3

Perhaps the problem statement needs clarification?

Thank you!

Unfortunately, this activity has had many problems since the last months and it seems that this long story is not over yet. It looks like a soap opera. I'm waiting for the next chapters.

Hello Zigurath,

There is actually an issue with this activity. Staff is aware of it and working on it (though I don't understand why it is so long).

Yes I found the same thing but at least it was easy to figure out what the problem was and fix my code to comply (changed my N to start at 0 instead of 1 nbd)

Had the same issue on 08Jan2020. Once I saw the expected output as compared to what I generated, it was an easy fix.
